Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on _____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

Election/Restrictions

1. Per telephone conversation between examiner George Koch and William L. Androlia on 1/7/2002 and the applicant's letter dated 1/17/02, a provisional election was made without traverse to prosecute the invention of group I, claims 1-6 and 13. Claims 7-12 and 14 are withdrawn from further consideration by the examiner, 37 CFR 1.142 (b) as being drawn to a non-elected invention.

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2877

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abe (5,803,341) in view of Bartschat (4,980,971).

Regarding claims 1 and 13, Abe discloses a bonding apparatus comprising a position detecting imaging device (5), a tool (16) in which the position is measured, a light source (6,9) disposed at a specific location for projecting reference pattern (light beams) toward the tool (16) (see figure 1). Abe does not explicitly teach the step of measuring a position of the position detecting imaging device; however, such a feature is known in the art as taught by Bartschat. Bartschat discloses an operation control device that determines an amount of offset between the position image device and the tool based on a measure value that is obtained when the position of the tool on the reference pattern is measured and a measured value that is obtained when the position of the detection imaging device is measured (column 4 lines 3-50). It would have been obvious to one having ordinary skill in the art at the time the invention was made to include in Abe a step of determining the position of the position detecting imaging device as taught by Bartschat if one would like to determine the amount of offset between the tool and the imaging device.

6. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Abe and Bartschat et al as applied to claim 1 and 13 above, and further in view of Hong et al (6,187,121).

Art Unit: 2877

Regarding claim 2, Hong discloses the use of a light source and a reference member (66) in order to calibrate and correct the bonding operation. It would have been obvious to one having ordinary skill in the art to include in Abe and Bartschat et al a light source and reference member for the purpose of determining the position of the imaging device. Thus, an accuracy of the measurement is obtained.

Allowable Subject Matter

7. Claims 3-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The following is an examiner's statement of reasons for allowance: the cited art does not teach or suggest the last two steps of claim 3, "said step of projecting ... said reference member" and "said step of determining ... said position detection imaging device".

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Following references relate to bonding method and apparatus: Takahashi et al (6,542,783), Biggs et al (5,702,049), Tomigashi et al (5,541,834), Enokido et al (6,467,673 and US2001/0016062), Hayata et al (6,464,126, US2001/0011669, US2003/0030821), Kyomasu et al (6,449,516).
